Delta Diablo Receives Three State-Level Environment Awards

Antioch, CA: Delta Diablo is proud to announce they have received three state-level awards from the California Water Environment Association (CWEA):

2016 Plant of the Year (Medium) - This award honors exceptional California wastewater resource recovery facilities and agencies. The rating criteria are very broad based, covering every aspect of our operations. They include an agency's compliance record, biosolids processing, fiscal management, pretreatment program, safety program, professional development, energy conservation, resource recovery, public information, inventory control, innovation, computer and supervisory control and data acquisition (SCADA) systems and maintenance systems.

2016 Community Engagement & Outreach Person of the Year – was awarded to Angela Lowrey, our Public Information Manager in recognition of her community engagement and communications work at the local, regional and state national levels.

2017 Film Festival FIRST PLACE for Public Education (Amateur) category - every three years, CWEA hosts a film festival as part of its annual awards program. Films are based on information and issues related to the field of wastewater in California. There are two categories: (a) “public education” to inform the public or change public behaviors or attitudes; and, (b) “training” produced to train in-house personnel. Delta Diablo was presented with first place in the Public Education (Amateur) category for our work with 2015-2016 Antioch High School Media Tech Linked Learning Academy for their 11th Grade end-of-year project on a video titled “Welcome to Delta Diablo”.

Established in 1929, CWEA's awards program has grown to acknowledge outstanding achievement in more than 20 categories honoring exceptional California wastewater professionals, collection systems, and treatment plants. The program seeks to recognize outstanding achievements within the water environment field, improve the professional status of all personnel working in the field, and stimulate public awareness of the importance of public health and the water environment.
